

CLIQ Desktop PD

CLIQ Key programming device

Used centrally by a security administrator, the desktop programming device manages encrypted data transfer between the CLIQ software and physical CLIQ devices and extracts local audit trail readouts from CLIQ keys, providing the information to the system administrator. A component of the CLIQ Web Manager, the desktop programming device enables users to issue and reprogramme CLIQ keys.

APPLICATION

- Communication interface for encrypted data transmission between CLIQ Local Manager/CLIQ Web Manager and programming key
- Programming for user keys and reading station to read audit trails from electronic user keys
- Access rights in the software (e.g. time zone, summer/winter time) are uploaded to the user keys
- CLIQ Desktop PD is connected to the administrator's PC via Micro USB cable

FEATURES

- Electronic logon device for administrators
- Encrypts data with AES/DES encryption
- Transferring of audit trails
- Flexible user management
- No battery
- Cloud (web)-based software
- Compatible with: Triton CLIQ Remote
- EMC tested according to EN61 000-6-2, 3 (2001) (2003)
- For central administration
- Protection:
 - protected against dripping water;
 - not for outdoor environment
- Environmental requirements, standards and labels: RoHS, CE and FCC
- Communication: USB 2.0 Micro-A
- Weight: 100 g
- Temperature range: -40 °C to +80 °C
